

Item No.: SE2905-3K

Set of high-pressure tubes with quick-release couplings

The quick-release couplings of flat-face design minimise the possibility of leaks when connecting or disconnecting tubes. The couplings are designed for one-handed use, making it quick and easy to connect or disconnect them.

In addition, they also offer protection against unintended disconnection thanks to a manual safety lock. The coupling housing and lugs are self-sealing when the couplings are not joined. It is only permissible to connect and disconnect the couplings when the tubes are not under pressure.

Set consisting of the following:

- 3 Tubes, 250mm
- 6 Tubes, 500mm
- 1 Tubes, 750mm

Technical data:

- 1 Quick-release coupling
- 1 Coupling lug
- High-pressure 11/12 nylon tube with kevlar mesh
- Operating pressure 10 MPa (100 bars)
- Maximum allowed pressure 63 MPa (630 bars)
- Temperature range -20°C – +100°C
- Minimum bending radius 20 mm
- DN 2 tubing
